The membrane-associated protein encoded by this gene is a member of the superfamily of ATP-binding cassette (ABC) transporters. ABC proteins transport various molecules across extra- and intracellular membranes. ABC genes are divided into seven distinct subfamilies (ABC1, MDR/TAP, MRP, ALD, OABP, GCN20, Mbits). This protein is a protein in the ABC1 subfamily. This protein is a protein in the ABC1 subfamily.

Background: White). This protein is a member of the ABC1 subfamily. Members of the ABC1

subfamily comprise the only major ABC subfamily found exclusively in multicellular eukaryotes. The full transporter encoded by this gene may be involved in development of resistance to xenobiotics and engulfment during

programmed cell death.
