

Cat. No:	IS20122
Size:	1 mg
Clone:	POLY
<b>Concentration:</b>	2mg/ml
Host:	Goat
Isotype:	IgG
Reactivity:	Rabbit
Applications:	Recommended Dilution Range 1-10 $\mu$ g/mL of the IgG conjugate for most applications. Appropriate dilutions of the conjugate should be determined empirically.
<b>Purification:</b>	Aff. Pur.
Background:	Far-red fluorescent dyes offer the advantage of ultra sensitive detection because background signal due to auto-fluorescence in most biological samples is minimal in this spectral region. For many years, the cyanine dye Cy-5 has been the dye of choice for such detection. More recently, Alexa Fluor® 647 has been developed as a better alternative by having brighter fluorescence and higher photostability. On the other hand, while Alexa Fluor® 633 is photostable, its fluorescence on proteins is very weak
Form:	liquid
Buffer:	In PBS pH $\sim$ 7.4 containing 50% glycerol, 2 mg/mL bovine serum albumin (lgG-free and protease-free) and 0.05% sodium azide.
Storage:	Store at 4°C for several months. Protect from light. For longer storage, divide the conjugate into small aliquots and freeze at -20°C. Avoid repeated freezing and thawing.
Properties:	Color and Form: Blue solution. Spectral Properties $\lambda abs/\lambda em = 630/650$ nm (in pH 7.4 PBS buffer) Alexa Fluor 633 is spectrally similar to DyLightTM 633.
