

Cat. No: AB-10678
Conjugate: Unconjugated
Size: 100 ul
Clone: POLY
Concentration: 1mg/ml
Host: Ch
Isotype: IgY
Immunogen: Native GFAP, purified from bovine spinal cord
Reactivity: Hu, Ms, Rt, Ct, Mamm

Applications: Western blot: 1:5,000 Immunocytochemistry/Immunofluorescence in cell tissues using a fluorescent antibody : 1:2,500 Immunohistochemistry in tissue sections (paraffin)&(frozen): 1:1,000 Immunohistochemistry: when using Peroxidase or other enzyme linked methods: 1:5,000

Molecular Weight: 55kDa

Purification: Aff. Pur.

Background: Glial Fibrillary Acidic Protein (GFAP) was discovered by Amico Bignami and coworkers as a major fibrous protein of multiple sclerosis plaques (1). It was subsequently found to be a member of the 10nm or intermediate filament protein family, specifically the intermediate filament protein family Class III, which also includes peripherin, desmin and vimentin. The GFAP protein runs on gels at ~55kDa protein, usually associated with lower molecule weight bands which are thought to be proteolytic fragments and alternate transcripts from the single gene. GFAP is strongly and specifically expressed in astrocytes and certain other astroglia in the central nervous system, in satellite cells in peripheral ganglia, and in non-myelinating Schwann cells in peripheral nerves. In many damage and disease states GFAP expression is heavily upregulated in astrocytes. In addition neural stem cells frequently strongly express GFAP. Antibodies to GFAP are therefore very useful as markers of astrocytic cells and neural stem cells. In addition many types of brain tumor, presumably derived from astrocytic cells, heavily express GFAP. Finally, Alexander's disease was recently shown to be caused by point mutations in protein coding region of the GFAP gene (2). All forms of Alexander disease are characterized by the presence of Rosenthal fibers, which are GFAP containing cytoplasmic inclusions found in astrocytes.

Form: Liquid

Buffer: Supplied in 50% PBS, 50% glycerol plus 5mM NaN3

Storage: Store at 4°C for short term. For long term storage, leave frozen at -20°C. Avoid freeze / thaw cycles.
