<b>Background:</b>	Solute carrier family 1(glial high-affinity glutamate transporter), member 3, also known as SLC1A3,EAAT1 or GLAST, is a protein that in humans is encoded by the SLC1A3 gene. This gene is a member of high affinity glutamate transporter family. SLC1A3 is mapped to chromosome 5p13.2 by fluorescence in situ hybridization(FISH). This gene transports L-glutamate and also L- and D- aspartate. It is essential for terminating the postsynaptic action of glutamate by rapidly removing released glutamate from the synaptic cleft. This gene acts as a symport by cotransporting sodium.
