

## **Product Data Sheet:** Ki-67 Rabbit Monoclonal Antibody

Cat. No: MAB-90948 Conjugate: Unconjugated

Size: 100 ug Clone: SP6 **Concentration:** 1mg/ml Host: Rabbit Isotype: IgG

SRecombinant human construct containing amino acids 1,111-1,490 expressed in Immunogen:

and purified from E. coli.

Reactivity: Hu, Ms, Rt

Western Blot: 1:2,000-1:5,000 Immunohistochemsitry (paraffin, formalin, frozen **Applications:** 

Tissues):1:500 Immunofluorescence: 1:1,000-1:2,500 Immunocytochemistry:

1:1,000-1:2,500

**Molecular Weight:** 345 kDa - 395 kDa

**Purification:** 

The Ki-67 proteins were first discovered in an attempt to generate cancer specific monoclonal antibodies. A monoclonal antibody which bound to structures in the nuclei of dividing but not quiescent cells was produced and shown to bind two very large proteins of molecular weight 345kDa and 395kDa. The two proteins were derived from alternate transcripts of a single gene. The presence of Ki-67

proteins, detected with an appropriate antibody, is an indicator of cell **Background:** proliferation and the level of Ki-67 expression is one of the most reliable

> biomarkers of proliferative status of cancer cells. The Ki-67 antibody was raised against a recombinant construct containing amino acids 1,111-1,490 of human Ki-67 isotype 1. The antibody can be used to identify dividing cells in rat and mouse brain and also works on paraffin sections of human tissues, where it is useful to identify cancer cells. Mouse select image at left for larger view.

Form: Liquid

**Buffer:** Supplied as an aliquot of serum plus 5mM sodium azide

Storage for short term at 4°C recommended, for longer term at -20°C, minimize Storage:

freeze/thaw cycles

For Research use only **IMMUNOLOGICAL SCIENCES**
