

Product Data Sheet: Phospho-ACCα (S80)

Cat. No: ABP-0298

Conjugate: Unconjugated

Size: 100 ug

Clone: Poly

Concentration: 1mg/ml

Host: Rb

Isotype: IgG

The antiserum was produced against synthesized peptide derived between 46-95

Immunogen: amino acids from the N-Terminal region of human ACC1 around the

phosphorylation site of Ser80.

Reactivity: Hu, Ms, Rt

Applications: Western blotting 1:500-1:3000 Immunohistochemistry (Paraffin) 1:150-100 Elisa:

1:1000

Molecular Weight: 280 kDa

Polyclonal antibodies are produced by immunizing animals with a synthetic

Purification: phosphopeptide corresponding to residues surrounding Ser79 of rat ACC.

Antibodies are purified by protein A and peptide affinity chromatography.

Acetyl-CoA carboxylase (ACC) catalyzes the pivotal step of the fatty acid synthesis pathway. The 265 kDa ACC is the predominant isoform in liver,

adipocytes and mammary gland, while the 280 kDa ACCIIIs the major isoform in

Background: skeletal muscle and heart (1). Phosphorylation by AMPK at Ser79, or by PKA at

Ser1200, inhibits the enzymatic activity of ACC (2). ACC is a potential target of anti-obesity drugs (3,4). Phospho-Acetyl-CoA Carbox-ylase (Ser79) Antibody detects endogenous levels of ACC only when phosphorylated at serine 79.

Form: liquid

Buffer: Rabbit IgG in phosphate buffered saline (without Mg2+ and Ca2+), pH 7.4,

150mM NaCl, 0.02% sodium azide and 50% glycerol.

Storage: Store at -20°C. Do not aliquot the antibody.
