

Product Data Sheet: Phospho-AKT1 (T308)

Cat. No: ABP-0304

Conjugate: Unconjugated

Size: 100 ug
Clone: Poly
Concentration: 1mg/ml
Host: Rb

Isotype:

A phospho specific peptide corresponding to residues surrounding T308 of human

AKT1.

IgG

Reactivity: Hu, Ms, Rt **Applications:** WB 1:1,000 **Molecular Weight:** 60 kDa

Purification: antibody is produced by immunizing animals with a synthetic phosphopeptide

corresponding to residues around Thr308 of mouse Akt1

Synonyms: AKT;CWS6;PKB;PKB-ALPHA;PRKBA;RAC;RAC-ALPHA

The serine-threonine protein kinase encoded by the AKT1 gene is catalytically inactive in serum-starved primary and immortalized fibroblasts. AKT1 and the related AKT2 are activated by platelet-derived growth factor. The activation is rapid and specific, and it is abrogated by mutations in the pleckstrin homology

domain of AKT1. It was shown that the activation occurs through

Background: phosphatidylinositol 3-kinase. In the developing nervous system AKT is a critical

mediator of growth factor-induced neuronal survival. Survival factors can suppress apoptosis in a transcription-independent manner by activating the serine/threonine kinase AKT1, which then phosphorylates and inactivates components of the apoptotic machinery. Mutations in this gene have been associated with the Proteus syndrome. Multiple alternatively spliced transcript

variants have been found for this gene.

Form: liquid

Buffer: PBS with 0.02% sodium azide,50% glycerol,pH7.3.

Storage: Store at -20°C. Avoid freeze / thaw cycles.

For Research use only IMMUNOLOGICAL SCIENCES
