

Product Data Sheet: Phospho-EGFR (Y1173)

Cat. No: MAB-90138

Conjugate: Unconjugated
Size: 100 ug

Clone: EM-13
Concentration: 1mg/ml
Host: Ms

Isotype: IgG1

Immunogen: Synthetic phospho-peptide covering sequence around tyrosine 1173 of human EGFR.

Reactivity: Hu

Applications: Flow Cytometry Immunoprecipitation Western Blotting Recommended dilution: 1

μg/ml Positive control: EGF-stimulated A431 Negative control: Non-stimulated A431

Purification: Purified from hybridoma culture supernatant by protein-A affinity chromatography.

The oncoprotein EGFR (epidermal growth factor receptor), also known as HER1 / ErbB1, is a member of ErbB family of cell surface receptor tyrosine kinases. This 170 kDa transmembrane glycoprotein is often associated with cancerogenesis, although its activation state is controlled at various levels including trafficking and degradation

Background: steps. Binding of receptor-specific ligands to the EGFR ectodomain results in

formation of homodimeric or heterodimeric kinase-active complexes into which HER2

/ ErbB2 is recruited as a preferred partner. Subsequent signaling cascades such as RAS/MAPK and PI3K/AKT pathways lead to cell proliferation and survival

responses. The antibody EM-13 reacts with human EGFR (ErbB1 / HER1)

phosphorylated on tyrosine 1173.

Form: liquid

Buffer: Phosphate buffered saline (PBS) with 15 mM sodium azide, approx. pH 7.4

Storage: Store at 2-8oC. Do not freeze. Do not use after expiration date stamped on vial label.

For Research use only IMMUNOLOGICAL SCIENCES
