

## **Product Data Sheet:** Phospho-FGFR1-Y654

Cat. No: ABP-0037

Conjugate: Unconjugated

Size: 100 ug Clone: Poly **Concentration:** 1mg/ml Host: Rb

A phospho specific peptide corresponding to residues surrounding Y654 of human Immunogen:

FGF Receptor 1

**Reactivity:** Ms

Isotype:

**Applications:** WB: 1:1000

**Molecular Weight:** 6kDa/16kDa/33kDa/55-95kDa

IgG

**Purification:** Affinity purification

FGFR1; BFGFR; CD331; CEK; ECCL; FGFBR; FGFR-1; FLG; FLT-2; FLT2; HBGFR; **Synonyms:** 

HH2; HRTFDS; KAL2; N -SAM; OGD; bFGF-R-1; fibroblast growth factor receptor 1

The protein encoded by this gene is a member of the fibroblast growth factor receptor (FGFR) family, where amino acid sequence is highly conserved between members and throughout evolution. FGFR family members differ from one

another in their ligand affinities and tissue distribution. A full-length

representative protein consists of an extracellular region, composed of three immunoglobulin-like domains, a single hydrophobic membrane-spanning segment and a cytoplasmic tyrosine kinase domain. The extracellular portion of the protein

interacts with fibroblast growth factors, setting in motion a cascade of

downstream signals, ultimately influencing mitogenesis and differentiation. This **Background:** 

> particular family member binds both acidic and basic fibroblast growth factors and is involved in limb induction. Mutations in this gene have been associated with Pfeiffer syndrome, Jackson-Weiss syndrome, Antley-Bixler syndrome, osteoglophonic dysplasia, and autosomal dominant Kallmann syndrome 2. Chromosomal aberrations involving this gene are associated with stem cell myeloproliferative disorder and stem cell leukemia lymphoma syndrome. Alternatively spliced variants which encode different protein isoforms have been

described; however, not all variants have been fully characterized.

Form: liquid

**Buffer:** PBS with 0.02% sodium azide, 50% glycerol, pH7.3.

Store at -20°C. Avoid freeze / thaw cycles. Storage:
