

Product Data Sheet: Phospho-NFKB-P50 (S932)

Cat. No: ABP-0417

Conjugate: Unconjugated

Size: 100 ug
Clone: Poly
Concentration: 1mg/ml
Host: Rb

Isotype:

A phospho specific peptide corresponding to residues surrounding Ser932 of

human NFKB-p50

Reactivity: Hu, Ms, Rt

Applications: WB: 1:1000 IHC: 1:50 - 1:100

IqG

Molecular Weight: 105 kDa

Purification: Affinity purification

This gene encodes a 105 kD protein which can undergo cotranslational processing by the 26S proteasome to produce a 50 kD protein. The 105 kD protein is a Rel protein-specific transcription inhibitor and the 50 kD protein is a DNA binding subunit of the NF-kappa-B (NFKB) protein complex. NFKB is a transcription regulator that is activated by various intra- and extra-cellµlar stimµli such as cytokines, oxidant-free radicals, µltraviolet irradiation, and bacterial or

Background: such as cytokines, oxidant-free radicals, µltraviolet irradiation, and bacterial or viral products. Activated NFKB translocates into the nucleus and stimµlates the

expression of genes involved in a wide variety of biological functions. Inappropriate activation of NFKB has been associated with a number of

inflammatory diseases while persistent inhibition of NFKB leads to inappropriate

immune cell development or delayed cell growth. Two transcript variants

encoding different isoforms have been found for this gene.

Form: liquid

Buffer: PBS with 0.02% sodium azide, 50% glycerol, pH7.3.

Storage: Store at -20° C. Avoid freeze / thaw cycles.

For Research use only IMMUNOLOGICAL SCIENCES
