

Product Data Sheet: Phospho-Raf-1 (S259)

Cat. No: ABP-0443

Conjugate: Unconjugated

Size: 100 ug
Clone: Poly
Concentration: 1mg/ml
Host: Rb

Isotype:

Immunogen: Synthesized peptide derived from human Raf-1 around the phosphorylation site of

S259.

IgG

Reactivity: Hu, Ms, Rt, Monkey

Applications: Western Blot: 1:1000-1:2000 Immunohistochemistry(paraffin-embedded tissues):

1:100-1:300 ELISA: 1:20000

Molecular Weight: 73 kDa

Purification: The antibody was affinity-purified from rabbit antiserum by

affinitychromatography using epitope-specific immunogen.

Raf-1 is a protein encoded by the RAF1 gene which is approximately 73 kDa. Raf-1 is localised to the cytoplasm, cell membrane, mitochondrion and nucleus. It is involved in RET signalling, the IL-2 pathway, regulation of lipid metabolism and insulin signalling-generic cascades. When it is activated, the cellular RAF1 protein can phosphorylate to activate the dual specificity protein kinases MEK1 and MEK2, which in turn phosphorylates to activate the serine/threonine specific protein kinases. ERK1 and ERK2. It plays an important role in the control of gene

Background: protein kinases, ERK1 and ERK2. It plays an important role in the control of gene expression involved in the cell division cycle, apoptosis, cell differentiation and

cell migration. Raf-1 is expressed in skeletal muscle With isoform 1 is more abundant than isoform 2. Mutations in the RAF1 gene result in Noonan syndrome, Leopard syndrome and cardiomyopathy. Phospho-Raf-1 (S259) Polyclonal

Antibody detects endogenous levels of Raf-1 protein only when phosphorylated at

S259.

Form: liquid

Buffer: Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.

Storage: Store at -20°C and avoid repeat freeze-thaw cycles.
