

Product Data Sheet: PRKACA

Cat. No: MAB-94617

Size: 100 ug
Clone: PR10
Concentration: 1mg/ml
Host: Ms

Isotype: IgG

Immunogen: Recombinant protein of human PRKACA.

Reactivity: Hu, Ms, Rt

Applications: Western Blot: 1:500 - 1:2000 Immunofluorescence: 1:50 - 1:200

Molecular Weight: 40kDa **Purification:** Aff. Pur.

Synonyms: PRKACA; PKACA; PPNAD4; cAMP-dependent protein kinase catalytic subunit alpha

This gene encodes one of the catalytic subunits of protein kinase A, which exists as a tetrameric holoenzyme with two regulatory subunits and two catalytic subunits, in its inactive form. cAMP causes the dissociation of the inactive holoenzyme into a dimer of regulatory subunits bound to four cAMP and two free monomeric catalytic subunits. Four different regulatory subunits and three

catalytic subunits have been identified in humans. cAMP-dependent

phosphorylation of proteins by protein kinase A is important to many cellular processes, including differentiation, proliferation, and apoptosis. Constitutive

activation of this gene caused either by somatic mutations, or genomic duplications of regions that include this gene, have been associated with

hyperplasias and adenomas of the adrenal cortex and are linked to corticotropin-

independent Cushing's syndrome. Alternative splicing results in multiple

transcript variants encoding different isoforms. Tissue-specific isoforms that differ at the N-terminus have been described, and these isoforms may differ in the post-

translational modifications that occur at the N-terminus of some isoforms.

Form: Liquid

Buffer: PBS with 0.02% sodium azide,50% glycerol,pH7.3.

Storage: Store at -20°C. Avoid freeze / thaw cycles.
