The protein encoded by this gene plays a key role in the acute regulation of steroid hormone synthesis by enhancing the conversion of cholesterol into

pregnenolone. This protein permits the cleavage of cholesterol into pregnenolone

Background: by mediating the transport of cholesterol from the outer mitochondrial membrane

to the inner mitochondrial membrane. Mutations in this gene are a cause of congenital lipoid adrenal hyperplasia (CLAH), also called lipoid CAH. A

pseudogene of this gene is located on chromosome 13.
