T-box transcription factor TBX21 is a protein that in humans is encoded by the

TBX21 gene. It is mapped to 17q21.32. This gene is a member of a

phylogenetically conserved family of genes that share a common DNA-binding domain, the T-box. T-box genes encode transcription factors involved in the

**Background:**regulation of developmental processes. This gene is the human ortholog of mouse
Thy 21 That gone. Studies in mouse show that Thy 21 protein is a Th1 sell specific.

Tbx21/Tbet gene. Studies in mouse show that Tbx21 protein is a Th1 cell-specific transcription factor that controls the expression of the hallmark Th1 cytokine, interferon-gamma (IFNG). Expression of the human ortholog also correlates with IFNG expression in Th1 and natural killer cells, suggesting a role for this gene in

initiating Th1 lineage development from naive Th precursor cells.
