Background:	trafficking protein particle complex 1(TRAPPC1) Homo sapiens This gene product plays a role in vesicular transport of proteins to the Golgi apparatus from the endoplasmic reticulum. The encoded protein is a component of the multisubunit transport protein particle (TRAPP) complex. Alternative splicing results in multiple transcript variants.[provided by RefSeq, Oct 2009],function:May play a role in vesicular transport from endoplasmic reticulum to Golgi.,similarity:Belongs to the TRAPP small subunits family. BET5 subfamily.,subunit:Part of the multisubunit TRAPP (transport protein particle) complex.,
