Background: Glyceraldehyde 3 phosphate dehydrogenase (GAPDH) is well known as one of the key enzymes involved in glycolysis. GAPDH is constitutively expressed in almost all tissues at high levels, therefore antibodies against GAPDH are useful as loading controls for Western Blotting. Some physiological factors, such as hypoxia and diabetes, increase GAPDH expression in certain cell types.

Western blot analysis of Hela (1), Rat brain (2), Rabbit Muscle(3), Sheep Muscle(4), and Mouse brain (5) with GAPDH mouse mAb(2B8) diluted at 1:10,000.

Western blot analysis of Chicken Muscle (1), Hamster Lung (2), Pig Heart(3), with GAPDH mouse mAb(2B8) diluted at 1:10,000.
