Background:	NCR1 (Natural Cytotoxicity Triggering Receptor 1) is a Protein Coding gene. Diseases associated with NCR1 include Viral Infectious Disease. Among its related pathways are Immunoregulatory interactions between a Lymphoid and a non-Lymphoid cell and Natural Killer Cell Receptors: Human Target Cell – NK Cell Ligand-Receptor Interactions. GO annotations related to this gene include signal transducer activity, downstream of receptor. An important paralog of this gene is LILRB3.
