Background:	This antimicrobial gene encodes a protein thought to be involved in T cell trafficking. The encoded protein binds to C-X-C motif chemokine 3 and is a chemoattractant for lymphocytes but not for neutrophils. [provided by RefSeq, Sep 2014],function:Cytokine that affects the growth, movement, or activation state of cells that participate in immune and inflammatory response. Chemotactic for activated T-cells. Binds to CXCR3.,induction:By interferon gamma. The induction is enhanced by TNF-alpha in dermal fibroblasts and vein endothelial cells.,online information:CXCL9 entry,similarity:Belongs to the intercrine alpha (chemokine CxC) family.,
