Ponceau S Solution

PROPERTIES:

Color & Form	Red solution
Solubility	N/A
Absorption/Emission	N/A
Extinction Coefficient	N/A

APPLICATION:

Ponceau S Solution is used for the detection of proteins on PVDF and nitrocellulose membranes. This stain is not recommended with nylon membranes. Ponceau S staining is reversible to allow further immunological detection. The limit of detection for this stain is about 250 ng of transferred protein. Ponceau S is a negative stain which binds to the positively charged amino groups of the protein. PVDF membranes must be rinsed in methanol then rinsed in water just before staining. Nitrocellulose membranes can be stained directly. Typically, membranes are incubated for 5-10 min in the stain, then rinsed in water until the background is clean. The stain can be completely removed from protein bands by continued washing in water or buffer. The Ponceau S Solution contains 0.1% Ponceau S (w/v) and 5% acetic acid.

TOXICITY:

Not established

Potentially harmful. Avoid prolonged or repeated exposure. Avoid getting in eyes, on skin, or on clothing. Wash thoroughly after handling. If eye or skin contact occurs, wash affected areas with plenty of water for 15 minutes and seek medical advice. In case of inhaling or swallowing, move individual to fresh air and seek medical advice immediately.

STORAGE AND HANDLING: Store at room temperature or 4 °C.
